

Final Report Rubric

STAT 184 — Summer 2026 Project

Submission

- One PDF per team to Canvas, rendered from a Quarto document in your team's GitHub repo.
- A URL to your 5–7 minute team video presentation.
- Final commit pushed to GitHub repo by the deadline.

Due: Friday, June 26, 11:59 p.m.

! Hard requirements

Your report must meet all of these. Missing any one costs the associated rubric points (and a missing required section can cost more than its line item, since dependent items also fail).

- **Structure:** all sections in the [Required report structure](#), in order.
- **Length:** at least **10 pages of body** (narrative + figures + tables). The title page, references, and Code Appendix do **not** count.
- **Figures:** at least **three**, each with a caption, a numbered cross-reference, and discussion in the text.
- **Table:** at least **one** non-trivial (summary/aggregated) table, captioned and cross-referenced.
- **Multivariate figure:** at least **one** figure showing **3+ variables**.
- **Code:** in the Code Appendix only, following a named style guide.

Rubric (100 points)

Components below follow the required report structure in the [project guidelines](#). Each figure earns its points only when it has a caption, is cross-referenced by number from the narrative,

and is discussed in the text.

Component	Points
Introduction & Motivation — clear and engaging	4
Research question(s) explicitly stated	4
Data Provenance documented (source, collector, purpose, cases)	5
Variables described and justified	4
Data Wrangling & Cleaning explained in narrative (not just code)	5
Non-trivial summary table (caption + cross-reference + discussion)	5
Figure 1 (caption + cross-reference + discussion)	4
Figure 2 (caption + cross-reference + discussion)	4
Figure 3 (caption + cross-reference + discussion)	4
At least one figure displays 3+ variables effectively	4
Findings / Conclusions clearly stated and tied to question(s)	6
Limitations & Future Work discussion	4
Body meets the 10-page minimum (narrative only; appendix/refs excluded)	3
References / citations of data and sources	4

Code quality (15)

Component	Points
Code runs cleanly (renders from scratch)	5
Follows a named style guide	3
Meaningfully commented	3
Code in appendix, not body	2
Reproducible from GitHub repo	2

Reproducibility (10)

Component	Points
GitHub repo well-organized with README	4
All team members have commits	3
Data accessible (in repo or via working URL)	3

Video presentation (10)

Component	Points
Within time limit (5–7 min)	2
Each team member speaks	3
Covers question, data, key findings	3
Coherent, well-paced, audible	2

AI use & integrity (5)

Component	Points
AI use note included in report	2
Honest attribution of external sources	3

Total: 100

Individual adjustments

Project grades may be adjusted up or down by up to 10 points per individual based on the oral checkpoints and observable team contribution. A student who could not engage with the project at the oral checkpoints will receive a lower individual grade than their team's collective work would suggest.

Late policy

Late work for the final project requires a request to the instructor **at least 24 hours before the deadline**, with evidence of progress and a proposed new deadline. Without prior arrangement, late final reports lose 10 points per 24 hours.
